

## PMI Day 2024: Gatti Filtrazioni Lubrificanti welcomes students from the Prevalle Comprehensive School

On Friday, 22 November, we had the pleasure of hosting classes from the Prevalle School for **PMI Day**, an initiative promoted by **Confindustria Brescia** to bring middle school students closer to the world of work at a crucial time when they are deciding on their educational path.

During the visit, the students had the opportunity to see how our company operates up close. We guided them through the laboratory, illustrating the processes used to detect oil contaminants, showcasing our filtration and flushing machinery, and explaining how our sensors work.

The students also watched practical demonstrations of electrical board welding and 3D printing, allowing them to experience the technologies we use daily firsthand. It was particularly stimulating to see their enthusiasm and curiosity as they followed the various stages of the visit, asking numerous questions and showing a strong interest in the technologies applied in our sector.

At Gatti Filtrazioni Lubrificanti, we firmly believe in young people: they are the future, and investing in their development is crucial for the progress of our society. Guiding them and teaching them the importance of education, teamwork, and collaboration is a responsibility we hold dear. Only with solid skills and a collaborative approach can we build the excellence of tomorrow.

We are confident that experiences like this are essential to help young people make informed choices about their future educational and professional paths, and we hope this day was both useful and inspiring for them. A heartfelt thank you goes to Confindustria Brescia for involving us in this initiative, and to the students for their active participation.
